Solar Energy Makes a Difference.

The largest generator of carbon emissions are the fossil fuels used to generate electricity. **One year of solar on your home is the equivalent of 15.6 tons of CO2 avoided or:**

**4.8
tons**

of garbage recycled

**1,718,000
fewer**

smartphones charged

**35,495
miles**

not driven

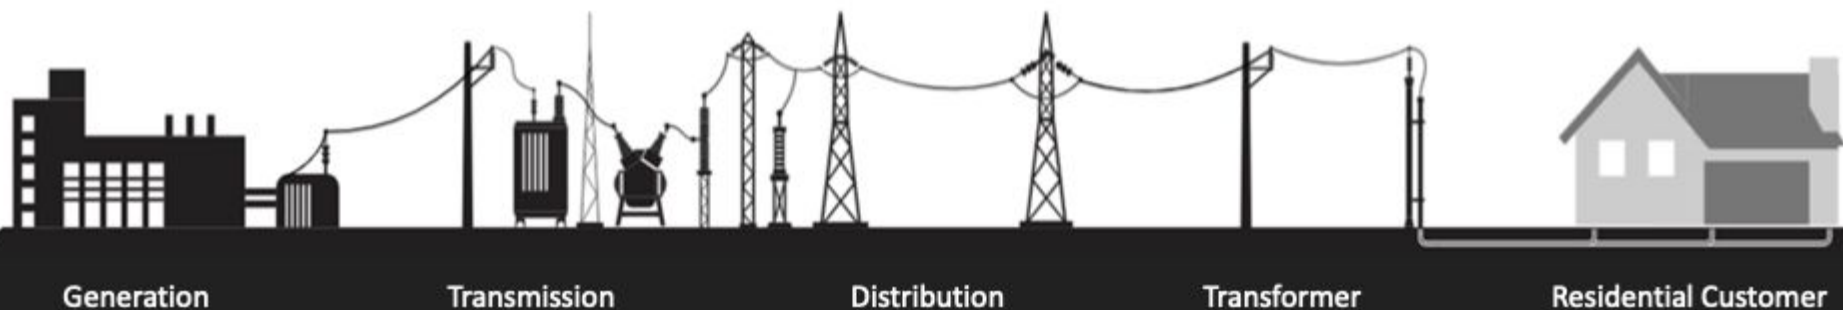

**3.1
fewer**

cars on the road

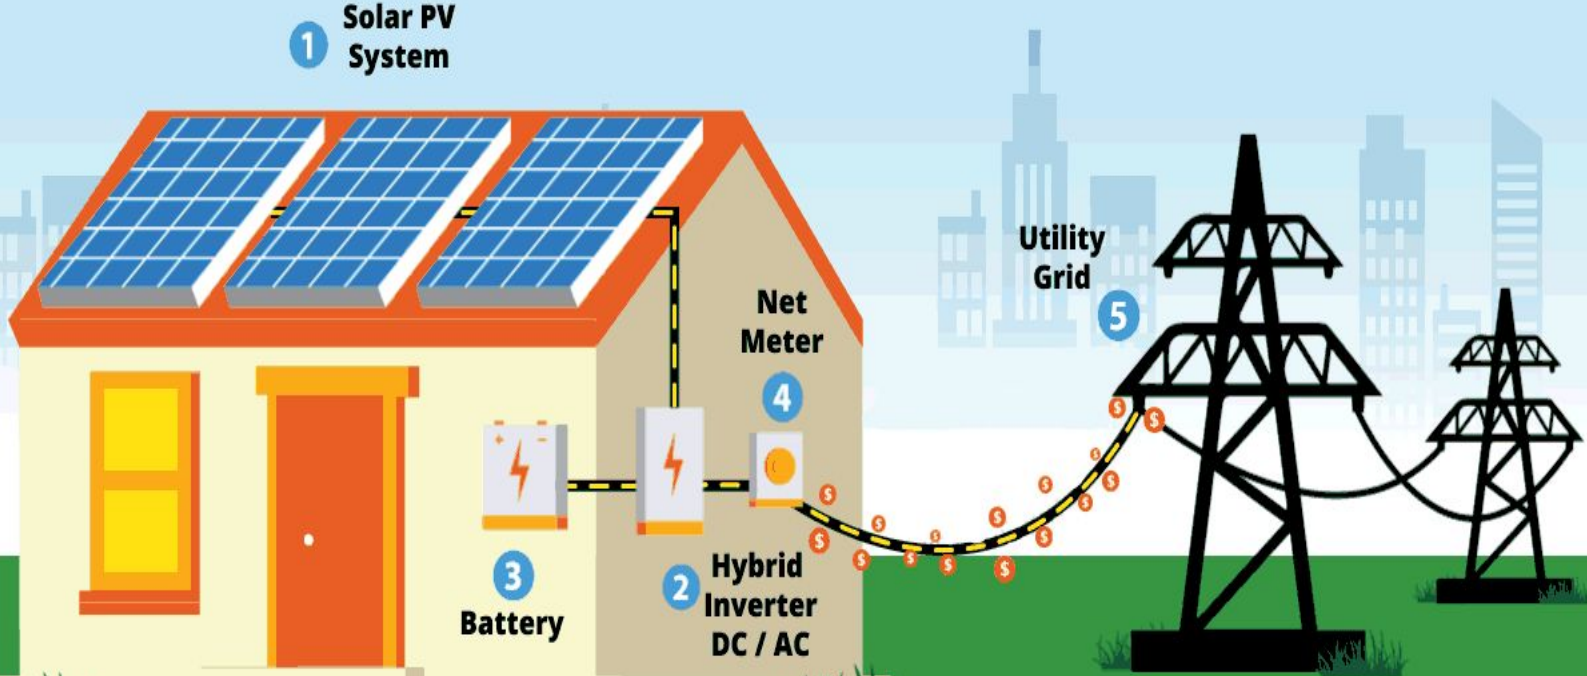

The Grid

Aside from being really difficult, this way of power delivery is terrible for our environment, and to top it off, it's VERY expensive. Rates will continue to increase unless we make a change.

How Solar Works

Solar is simple, efficient, better for the planet, cheaper than you, and you pay nothing to get started. Plus, there's no more annual rate increases to work into family budget. Why pay more to power your home when there's finally a better option?

The Power of Net Metering.

Sell Energy Back to the Grid

Once solar is installed the customer will sell energy back to the utility company when generating more than the home requires. During this time the meter will spin backwards showing a negative consumption of energy.

Earn Energy Credits to Offset Energy Use

As energy is sold to the utility company the customer earns energy credits that can be used during low solar production periods or peak times of the year. With this, the customer can also install a smaller system and achieve 100% offset with a lower solar payment

Texas #1 Installer: 1000 + installs a month

Warehouses in: Dallas, Austin, & Houston

Vertically Integrated
400 employees strong
Does NOT subcontract

Maintenance and Monitoring

25-year roof penetration and labor warranty

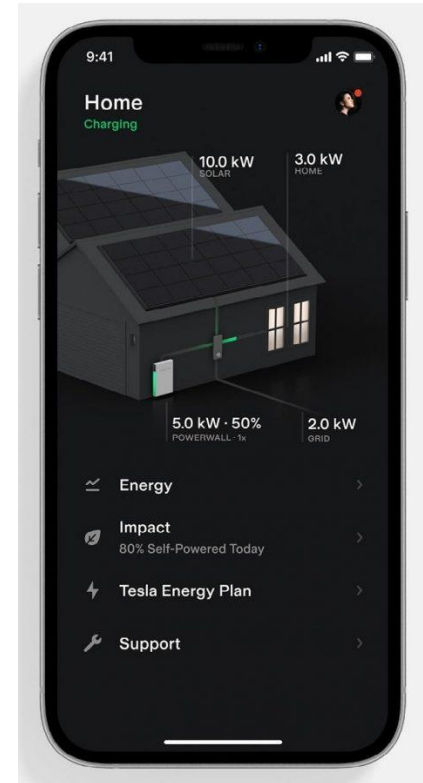

24/7 monitoring and diagnosis

25-year credit guarantee

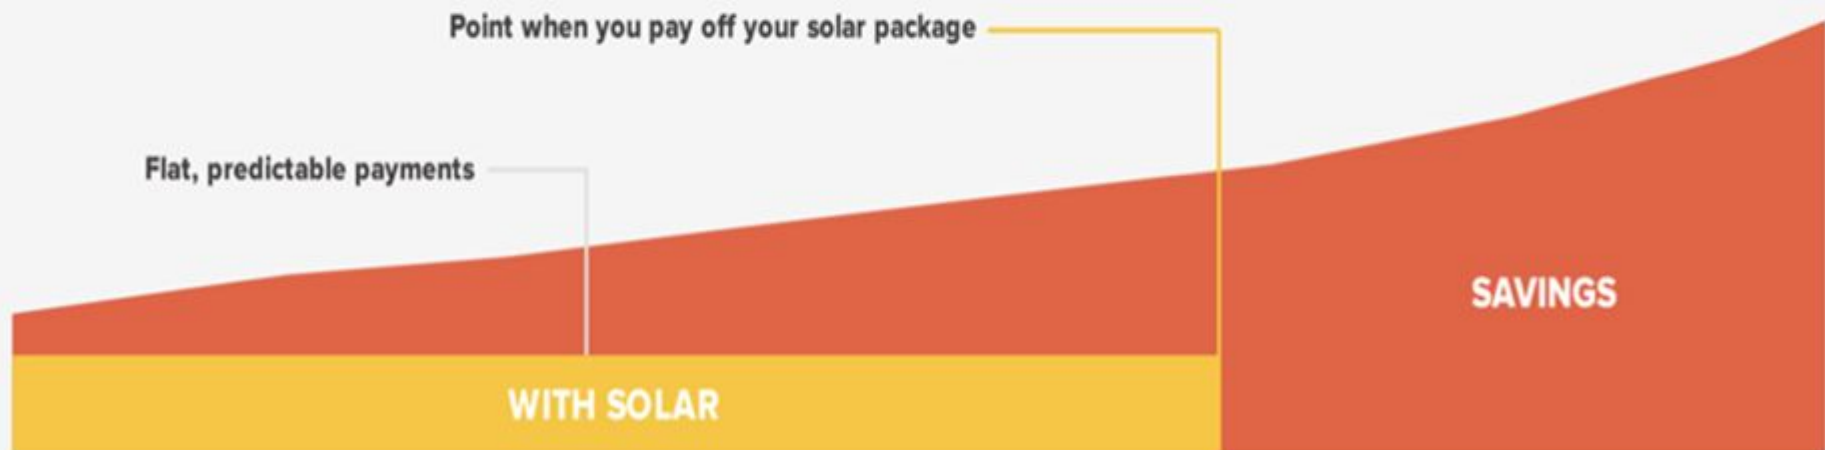

25-year production guarantee

Be your own power company and charge yourself less

As energy price increase 4% - 6% each year, the solar rate stays at a fixed rate

Moving with Solar

- Home Buyers prefer homes with lower expenses
- Easily transferred to new homeowners
- Solar can increase the value of your home
- Solar homes sell faster than homes without solar

How much does solar increase property value?

According to a recent study by Zillow, homes with solar panels sell for 4.1% more than homes without it.

The Options

Solar

- ✓ Pay less with a guaranteed cheaper rate
- ✓ No upfront cost
- ✓ 25 Year Risk Free Warranty
- ✓ Take control of future
- ✓ Solar homes sell faster and can increase the value of your home

Stay Where You're At

- Pay more with a higher unpredictable rate
- No control of your bill
- No savings
- You're renting your power at 100% loss
